

ROVERS

MAGAZINE

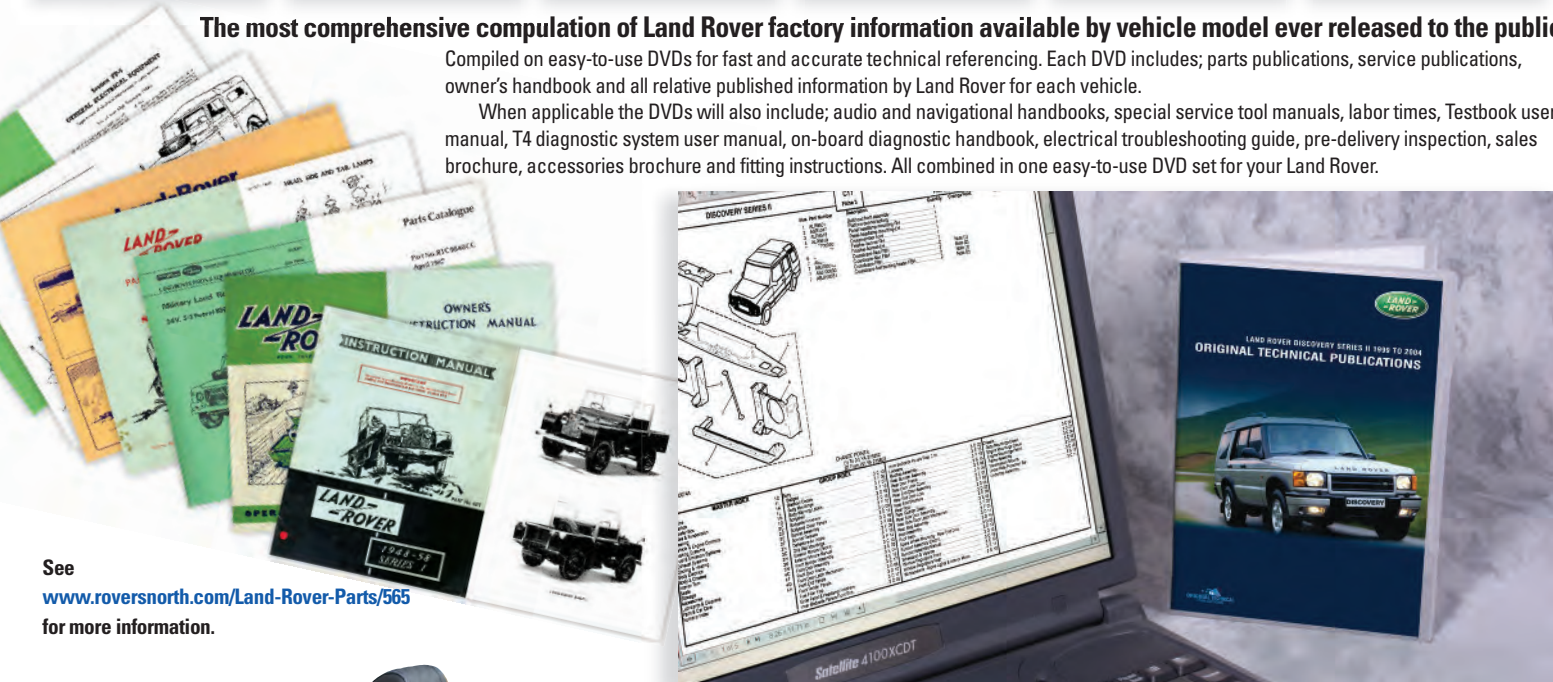

Original Land Rover Technical Publications

The most comprehensive compilation of Land Rover factory information available by vehicle model ever released to the public.

Compiled on easy-to-use DVDs for fast and accurate technical referencing. Each DVD includes; parts publications, service publications, owner's handbook and all relative published information by Land Rover for each vehicle.

When applicable the DVDs will also include; audio and navigational handbooks, special service tool manuals, labor times, Testbook user manual, T4 diagnostic system user manual, on-board diagnostic handbook, electrical troubleshooting guide, pre-delivery inspection, sales brochure, accessories brochure and fitting instructions. All combined in one easy-to-use DVD set for your Land Rover.

See www.roversnorth.com/Land-Rover-Parts/565 for more information.

Whether you're trudging through the snow, fighting off the winter chill, exploring the desert or gallivanting on a beach this winter, your Land Rover will get you there.

In February 1994, a 9-person Rovers North team with two Range Rover Classics and a Land Rover 110 completed the first and only unassisted winter ascent of Mt. Washington, a 6,288 ft. peak with infamously severe weather and 200-mile view on a sunny day. To celebrate we contacted each of the team members to share their memories of this historic expedition.

Is New Hampshire too cold for you? Sean Reagan and Mittie Babette Roger took *La Poderosa*, their '95 NAS Defender 90, 2,600 miles round trip from Mexico to Guatemala. At times their paths crossed the route of the famous 1995 Camel Trophy *Mundo Maya*.

Photojournalist Nicholas Bratton competed in the famous Pacific Northwest Land Rover Club's Northwest Challenge last fall and shares the wonders of central Washington with us. This year's Challenge took competitors through dense evergreen forests, along windswept ridges and over 4,000-foot passes, over broken basalt moonscapes, and through the dusty steppe of central Washington—as he notes, “a paradise for Land Rover enthusiasts.”

We drove an LR2 to this year's Mid Atlantic Rally, the long-running event of the Rovers Owners of Virginia, and basked in humid warmth, froze in snow flurries and enjoyed the spectacular farm and forest trails of western Virginia's Giles County. The autumn foliage colors and mountaintop views just added to the delight of the weekend.

This issue's regular columns will, we hope, give you some entertaining moments in between your Land Rover drives. Bill Burke has once again shared his off-road expertise in many parts of North America. We also wanted to celebrate Fabulously British activities in South Africa and Canada.

You don't have to tackle a mountain like Mt. Washington, with its record-setting 231 mph wind gusts, to enjoy adventures in your Land Rover. Parents will appreciate Kim Conolly's experiences camping with her two kids in Oregon in their Discovery's roof top tent.

These are exciting times for Land Rover, with the introduction of the new Discovery Sport this spring and the addition of the Td6 diesel engine for Range Rover and Range Rover Sport for the Fall 2015. Rovers Magazine will continue our coverage in our next issue.

Many enthusiasts have access to a heated garage—or a knowledgeable mechanic—and find the winter a perfect time to tackle those maintenance and/or upgrade jobs. As always, Rovers North presents many products to help you get the most out of your Land Rover. We thank you for reading *Rovers Magazine* and for letting Rovers North be a part of your Land Rover experience. //

Jeff Aronson
 Editor, *Rovers Magazine*

Our mission is to support all original Land Rover models that are no longer supported

by your local Land Rover franchise. We offer the entire range of Land Rover Genuine Parts direct from Land Rover UK, providing the highest quality parts and accessories at the best prices. In addition we offer our own line of parts called ProLine. Sourced from a variety of manufacturers, ProLine is our alternative when a Genuine Part is no longer available or a lower cost replacement is preferred. Visit our website www.roversnorth.com for a more complete view of our selection, or call us. All new parts and accessories sold by Rovers North are covered by our one year unlimited mileage warranty. We invite you to experience our knowledge, products and friendly service. Thank you for choosing Rovers North.

FABULOUSLY BRITISH

By Jeffrey Aronson
Photography by Rickert Cloete

Baie geluk to Marna and Edward.

Land Rovers serve many roles, but one of their most engaging is as wedding carriages. Dr. Marna Du Plessis married accountant Edward Turner in September 2014, in Lambert's Bay, South Africa, about 2.5 hours from Capetown. Her '78 Series III brought them to the Muisboskerm, a most unique open air restaurant, for their special day. "The petrol cable did break, but it was fixed the day before and she behaved brilliantly on the wedding day," reported Marna. Congratulations to the Turners for their Fabulously British celebration!

Benoit Kirouac, Calgary, AL, has spent the best times of his 22 years with his father, Francois, in their Land Rovers. He wrote, "My most beloved memories are set in the noisiest environment mankind can endure. I can remember every single 4X4 trip I went on with my father and his old 1964 black Land Rover Series II-A. Just the two of us, trying to find our way through the uncharted lands of North America, in a vehicle that seemed to barely hold together. Fighting against the bottomless mud pits, the thick forests, the deceiving rivers and never ending swamps, with only pre-historic tools to save the day.

I can even remember once where we were knee deep in dirt and a big piece of wood used as a lever at the right place got us out of trouble. The name of his Land Rover was "Lucky" and there was a reason for it. Whatever circle of hell we seemed to be lost in, my father's best friend would always keep running and moving forward. It is a living legend known from the coast of Nova Scotia all the way to North Carolina. Never would it be torn apart by a raging stream or be crushed by doing a barrel-roll on a rocky hill. His frame seemed to be built from titanium and his parts cemented together so nothing could bring them apart.

Now, once the trail was over and we were safe back home, you could be certain Lucky would break down on the way to the convenience store, but the mission was accomplished and he deserved his rest. He could be tracked anywhere just by following the oil stains he left behind him after a tremendous victory over nature. Nowadays, my father's health does not allow him to go off on adventures anymore, but he made sure the legend would be kept alive. He passed Lucky to my step-brother so he would remain in the family. One day, I will have my own Land Rover, and hopefully I will be able to create a new legend with my son."

In both English and French, this is Fabulously British.

Story by: Mittie Babette Roger
Photos: Sean Reagan and
Mittie Babette Roger

[Mittie Babette Roger left her native Louisiana for San Miguel de Allende, Mexico, where she chronicles her creative life through her blog and website. Sean Reagan explores life in Latin America from multiple perspectives, ranging from Washington, DC, to his home in Mexico. -ed.]

Our friends in San Miguel de Allende, our home in south-central Mexico, named our '95 NAS Defender 90, "La Poderosa," or, "The Powerful." The rather stock Land Rover remains beautifully simple, with a no-nonsense approach to getting there. It became the perfect vehicle for our thousands of miles of travel to Guatemala.

It took 870 miles to reach the border at Taisman, Chiapas, Mexico and cross into Guatemala at San Marcos. The no-man's land between the two nations, where we complete our paperwork, feels chaotic. Engulfed first by paperwork facilitators and then by torrential rains, Guatemala issues us a 90-day tourist pass. Exhilarated, we drive for the coast to catch the sunset in playa Tilapita.

Next came a 7,500-foot climb from sea level, winding into the foggy western highlands. Epic views appear around every hairpin turn we take in first and second gear. The crops around us change from plantains to corn and beans.

We pass through Quetzaltenango (the indigenous capital), Lake Atitlan, Antigua (the Guatemalan capital during Spanish colonization), and Chichicastenango—a gorgeous cradle of Mayan culture. We relish

in the mountain villages and farmlands between towns. We give rides to several farmers and their families over the three weeks—the women dressed in colorful huipils, traditional embroidered blouses. Sean especially enjoyed giving a ride to Mr. Camilo Garcia, a Mayan farmer who climbed aboard in the rain, scythe in hand.

Leaving the misty mountains, we took RN15 to Uspantán, where we met Werner. While I explored the hot cocoa and atole (warm rice milk) in the central market area, Werner tells us he has “a couple of these vehicles,” just around the corner. To our surprise, he showed us a '53 Series I and a highly modified '73 Series III, which he uses for competition in off-road meets.

From Werner, we learn of a mechanic in the nearby city of Cobán, who specializes in Land Rovers. The road is not completely paved, so the last slow and careful kilometers drag on as we wind through the mountains on a landslide-prone dirt road. In Cobán, we find the Los Chepes garage, a third-generation Land Rover garage run by Lotario Viduarre and his son. A source of know-how and parts for Central American Rover owners, his garage became the resting place of many a Series—a treasure trove of hard-to-find parts.

From Cobán, we take the road less traveled toward the northern jungles of Petén and the Tikal biosphere. The route had some surprises in store for us. An hour beyond Chisec, Verpaz, we find ourselves

pinned between two barricades of farmers protesting Guatemala's recent laws requiring farmers to certify their corn seeds with the government.

We spend the first day simply observing the peaceful protest. No traffic has been allowed through and a long line of vehicles, including 16-wheelers and local merchants carrying milk and other perishables, waits for permission to pass. Despite this, the situation remains calm until the evening. Noticing the crowd getting rowdier in preparation for a long night of protest, we seek refuge in an area where we camp and make use of a camp stove after a long day without food. We could hear the protesters yelling and chanting through the night.

The next morning, with dwindling resources and no access to a bank or store, we decide to negotiate with the protesters; we'll docu-

ment their battle in exchange for safe passage. We met the leaders at the blockade, made our pitch and received an affirmative vote. The "Five Village Leaders" signed and stamped a document requesting fellow protesters to let us continue north between Raxruha to Sayaxche. At the next roadblock the leaders read the document aloud in Spanish and in Quechi, the local dialect; a representative jumped in the back to escort us through the final roadblock of branches, rocks and burning tires.

We arrive in Tikal exhausted, but the archaeological site restores our energy. Spectacular temples that peek above the jungle canopy serve to remind us that this rainforest metropolis was once one of the most powerful city-states of the Mayan empire. Six large pyramids dominate the site; the most notable of these is the Temple of the Great Jaguar, a 154-foot high funerary dedicated to the city's last ruler.

The 1995 Camel Trophy *Mundo Maya* traveled through here in its efforts to maintain this heritage.

From there, the road home cuts through north-western Belize toward Chetumal, Mexico. We cross the Guatemala-Belizean border around 5pm. It's an easy crossing—no papers, just a stamp in Sean's passport granting us 24 hours to reach Mexico. We drive through the night, smelling the salty air as we near the coast. Climbing back up to 6,300 feet, the clutch fluid begins to leak fairly heavily onto Sean's left shoe—posing a problem when we realize the hood release cable is broken. As the shifting felt tighter, Sean created an alternate hood-popping procedure to top off the clutch and get us home.

La Poderosa covered the 2,641 miles with grace, but having motor oil and clutch fluid was the key to her success. In San Miguel, our bodies still vibrating from the road, we enjoy one of our favorite comfort foods—baked potato topped with cheese and flank steak. There's no place like home. 

[You can read more of Mittie Roger's travels at www.mittieroger.com. Sean Reagan's photography can be viewed at www.seanreaganphotography.com.]

[Mittie Roger loved her trip to Guatemala, but here are excerpts from her "7 Things Not to Do in Guatemala" blog post—ed.]

1. Don't use hustlers at the border to change money or complete paperwork.

It's tempting as a border approaches to want to ask for help, especially in developing nations. However, the folks poised at the border to help you make the transition often have an agenda of their own. Taking advantage of bewildered border-crossers is what they do.

2. Just don't go to Guatemala City.

Guatemala City, the country's capital, is notoriously violent and dangerous. If nothing more, petty theft lies around every corner.

We suggest avoiding it altogether...

3. Avoid the middleman in commerce.

Currently, one of Guatemala's social problems stems from vendors price-gouging the farmers, fisherman and creators of artisanal goods. We recommend going to the source—choosing to buy directly from markets where fishermen, farmers and workers can sell their own goods.

4. Don't fear the police.

Guatemala has a wonderful police department dedicated to tourists, called Politur. They were kind, helpful and went out of their way to direct and assist us, without ever asking for anything in return.

5. Don't assume there is a bank on every corner (or in every town).

Banks are only in larger towns, and while ATMs are readily accessible, they are old... We were pleasantly surprised by how many medium-sized towns had a Banco Azteca (also called Elektra), which changes dollars, euros or pesos.

6. Don't expect good coffee (despite the region being one of the best in the world for it).

Despite being one of the greatest regions in the world for coffee, most of it is exported. Most people drink instant coffee. Gourmet coffee houses are around, but will be advertised as such and (generally) cater to foreigners.

7. Don't drive at night.

Start and end early, especially when overlanding. There is less risk for crime during daylight hours—besides, dangerous road conditions only become more dangerous after dark.

”

FIRST & ONLY

By Jeffrey Aronson
Photography by Phil Berg

Twenty-one years ago on February 1, 1994, a Rovers North team of two Range Rover Classics and a Defender 110 successfully drove up New Hampshire's fabled Mt. Washington. It took seven hours to ascend the narrow 8-mile road in temperatures well below zero, with -70 degree wind chills.

It remains the first and only. No other team has completed a winter ascent without assistance from a Snow Cat. *Car and Driver* chronicled it in May 1994, and the story also appeared in *Land Rover Owner International*, as well as in the then *Rovers North News*.

Unlike promotional events in new vehicles, these Land Rovers had served as daily workhorses at Rovers North's Driving School. The event vehicles consisted of two 1988 3.5L V8 Range Rovers, each having over 100,000 miles and a 1985 3.5L V8 Land Rover 110 Station Wagon.

The team consisted of Rovers North's Mark and Andrea Letorney and then-staff members Lanny Clark, Mike Hopwood, Charlie Haigh and Randy Botala. Rounding out the group were journalists Phil Berg, Jim Allen and Harald Pietschmann. This twenty-first anniversary seemed a good time to interview each of them and share their recollections.

Lanny Clark
*Lanny Clark Restorations,
Colchester, VT*

“Why did we choose Mt Washington? I knew the person who ran the Mt. Washington Hill Climb for sports cars, and through him, got the ok to try the winter climb. The idea had the aspect of extreme sports that I liked and it was only a few hours away.

Mike [Hopwood] and I really researched and planned for this. We knew we had to be ready for anything, from a car fire to accidents. We made several scouting trips to determine weather patterns. One time we drove up in a fog so thick that we couldn’t see the weather observatory at the top, which was directly in front of us. We had to drive with the windows down just to see the road. The weather would determine everything. The winds on Mt. Washington are so strong they could blow a car door of its hinges!

We tried out techniques on Vermont’s Smugglers Notch [*a road closed every winter due to 10-15 ft snow drifts -ed.*], experimenting with sand ladders and ground anchors like the Pull Pal. In the end, we determined the best method would be to ride on top of the snow pack—which would range from 20 feet to bare ground where the winds blew off the snow.

We realized the whole idea would be to go against gravity and the restrictions of the snow. We’d need to get enough power to the wheels to get traction, but not so much that spinning tires would break through the snow. Worse yet, if the Rover did break through in that cold, it would freeze in place. When we did break through we’d have to winch quickly and drive carefully to return to the top of the snow pack.

The entire day was very hard. What I remember most was sweating my ass off! Then, at a lunch break, I took my coat off and got an ice cream headache from the cold. I could have taken a nap.”

Mike Hopwood
The 4x4 Center, Williston, VT

I must have gone over to Mt Washington four times before the actual climb, testing out techniques and conditions. One time I remember sinking up to the axles, breaking a winch line in the cold, dark and wet conditions. On another trip I rode to the top with the Weather Observatory’s Snow Cat checking snow depths along the way. I actually had more difficulty with the pre-running and testing than with the actual event!

Riding on top of the snow crust was a technique we were all aware of, and it became pretty clear that was the only way to get up the mountain. The most dramatic, if not the most difficult, was the final 100 yards. Because of the ice we had to chain up and trust in their traction. If the vehicle started to slide you’d be pitched into oblivion.

While it took 7 hours to get up, it took just over an hour to get down. We followed our tracks back down and the packed snow helped us get decent traction. We needed to pay attention to stay in our tracks.

I’m ready to do this again. Maybe in the coming year or two there might be an opportunity.”

“
*It was my first time being so friggin cold!
 Because my camera gear had to be kept at the same
 temperature as the outdoors, we had to keep the
 windows down in the Range Rover all day.*
 ”
 —Harald Pietschmann

Howie Wemyss
 General Manager, Mt Washington
 Auto Road

“I was here when Rovers North undertook their winter drive up the mountain. No one else had tried it until last winter, when we received a request from the Top Gear crew who wanted to drive up in a Subaru. We told them the car wouldn't make it once it left the groomed part of the road; sure enough, once they hit deep snow they were doomed. They didn't make it all the way up and their trip was completed with “a fair amount of smoke and mirrors,” as they said. Someone had told the Top Gear crew of the Rovers North success. To date no one else has accomplished it.”

Charlie Haigh

Asst. Parts Manager, Berglund Luxury Auto, Roanoke, VA

"I had been on the pre-runs with Mike and Lanny and I rode with Lanny in one Range Rover. I spent a lot of time outside of the car pushing away snow, hauling winch cable and resetting the Pull Pal. The first vehicle would set the ground anchor and the last one would bring it with them for the next run. We spent a lot of time walking back and forth. We were dressed for it, so even though the air temperatures fell to -20 F, it wasn't that bad.

We had no mechanical breakdowns. Once we started off we didn't turn off the Range Rovers all day; they don't burn that much fuel when idling or off-road. And we ran the original style and brand tires—BF Goodrich and Michelins, reduced to 12 psi. They were great all-purpose tires and had a great surface grip."

Phil Berg

Former editor of AutoWeek, senior editor, Car and Driver, now a journalist and author in S. Lyon, MI

"I remember with fondness the trip I took with the crew. That trip came about after I had participated in a winter trek through Canada's Northwest Territories. While in the Canadian Arctic, we drove mostly on snow covered roads in -50 F conditions. But driving through snowdrifts on Mt. Washington was an entirely new experience for me. It felt the same as trying to drive up a ski slope.

You must remember that this came before electronic aids; it was all driver skill. Mark [Letorney] was in a Land Rover 110. He aired down the tires very low, and showed the deft use of the throttle and clutch, all through the sensations he got through his hands, eyes and the seat of his pants. Today's electronics would not have worked as well as those drivers did.

I've been to the engineering centers of GM and Ford. When engineers are in a wind tunnel, they still use their fingers to determine airflow, rather than electronic sensors. I think the same thing held true on two feet of snow with ice underneath. The sensitivity of the fingers surely outstripped anything that electronic sensors might have—the team drivers could do all that with their fingers and feet.

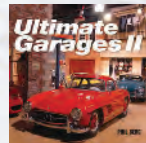

I'm pretty sure today's vehicles would break through the ice and snow! No matter how far vehicles have advanced today, I'm not certain they could match what the Range Rover Classics and Land Rover 110 did. This was way beyond what test drives in new Land Rovers have done for me. It still boggles my mind that we could drive up there with tires, without chains until we got to the last ice-covered 100 feet. At the summit, I slipped and fell down towards a cliff and I could not stop the slide! Once you walked around up there, you realized how dangerous it might be. I don't think we could top that drive today!"

Harald Pietschmann

Trail leader now in La Paz, Baja Mexico, former US correspondent for the German magazine Off Road

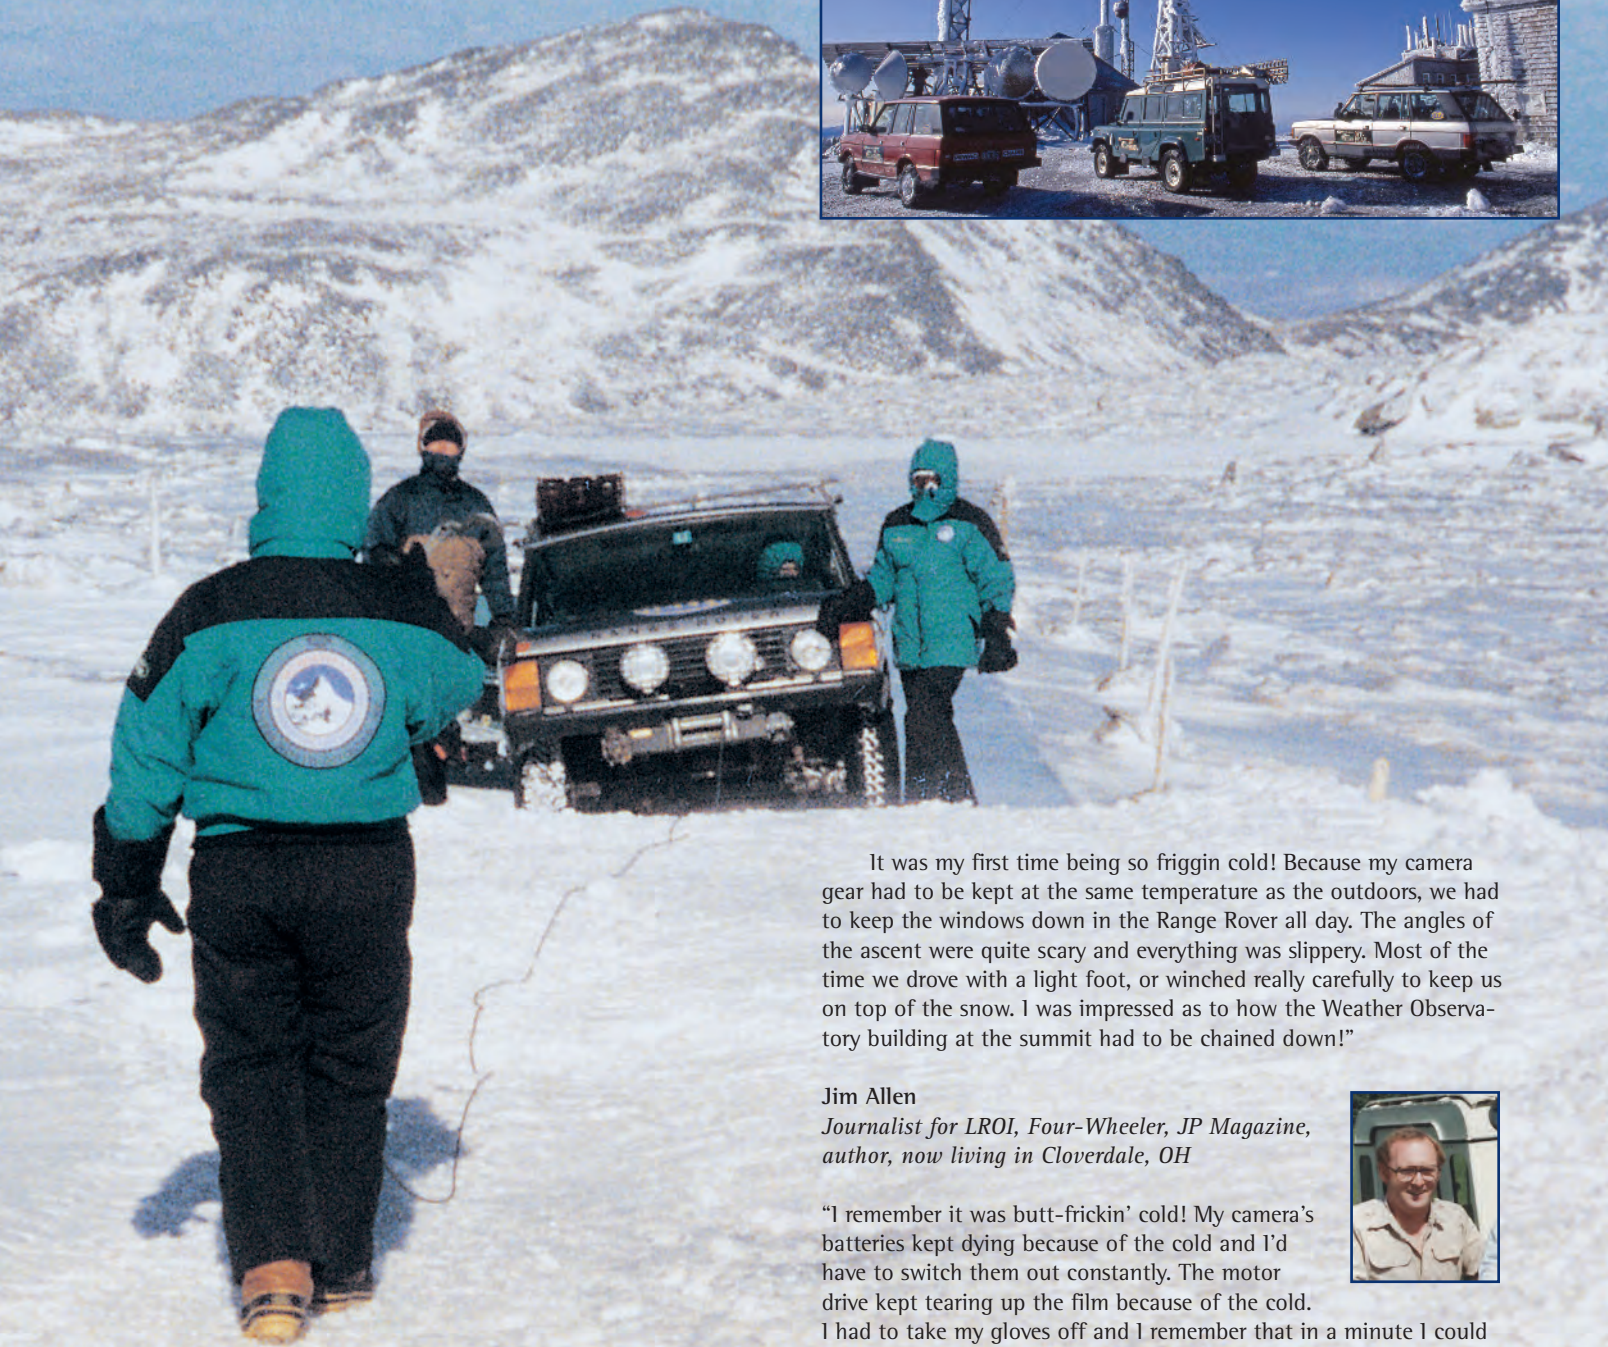

"I had met Mike Hopwood at a Rubicon Run; he was the best driver I had ever seen there. When he called me about this adventure, I knew I would be in good hands. I flew in from Los Angeles to find my luggage had not arrived, so I had to borrow and buy winter clothing.

Phil Berg has chronicled the fabulous buildings erected by car collectors in Ultimate Garages book series.

It was my first time being so friggin cold! Because my camera gear had to be kept at the same temperature as the outdoors, we had to keep the windows down in the Range Rover all day. The angles of the ascent were quite scary and everything was slippery. Most of the time we drove with a light foot, or winched really carefully to keep us on top of the snow. I was impressed as to how the Weather Observatory building at the summit had to be chained down!"

Jim Allen
Journalist for LROI, Four-Wheeler, JP Magazine, author, now living in Cloverdale, OH

"I remember it was butt-frickin' cold! My camera's batteries kept dying because of the cold and I'd have to switch them out constantly. The motor drive kept tearing up the film because of the cold. I had to take my gloves off and I remember that in a minute I could feel frostbite coming on!

I'd never driven anything over 8 feet of snow. Frankly, I hadn't thought it was possible. Mark was insistent upon doing it with as stock a vehicle as possible. We made several abortive attempts, but on the actual day we went we had few problems. We couldn't drive through the same tracks as the preceding Rover, but sometimes the trails was too narrow and we had no choice.

The view was so spectacular that I can close my eyes and still see it. There have been times off-roading in the Rockies I've experienced amazing scenes, but because Mt. Washington is the tallest peak in the region, the view was overwhelming!

Andrea Letorney
Co-founder, Rovers North

"I remember it was incredibly well orchestrated, like a choreographed dance. We had very skilled drivers, going about a mile an hour, so it was fun to watch. I was walking with crampons on my boots much faster than they could drive. It was a crystal clear day, but it became really cold, -70 F with the wind chill. We were bundled up—no skin was showing.

I walked up because I loved to hike; I wanted to watch rather than sit and be enclosed. And the driving was quite different than the mud and flat ground at Solihull where I earned my Land Rover Instructor certification. I had wanted to hike down, too, but as it got colder and dark, Mike instructed me to get into the Range Rover; the conditions were getting worse and that made time very important.

We had to trust and work with each other—no arguing, no second guessing. There was genuine danger. The conditions were brutal—even our water bottles were freezing—and we needed to work together to accomplish this. As a company, we had done standard team building; this was team building on steroids." One assumed we would be traveling up a snow covered mountain road. However, the fierce winds had sculpted the snow to the contour of the mountain side, in many places completely eliminating any trace of a road. The snow was so deep it was hard to tell if there was actually a road beneath us or just snow carved flat onto the side of the mountain by the snow cat.

Mark Letorney
Co-founder, Rovers North

Looking back, I remember the possibility of a winter summit was Lanny's idea. Lanny, Randy, Michael, Andrea and myself had recently been trained and certified as driving instructors by the masters at Land Rover UK. Andrea being the first ever Land Rover certified woman instructor. We wanted to create national attention for our driving school. Lanny was convinced that if the weather got really warm, then suddenly dropped below zero it would create a hard layer of frozen snow (piste) that could make it possible to drive on top of the snow without breaking through.

Michael jumped at the challenge and worked tirelessly at preparing our equipment and Range Rovers for the event. From the start we all agreed it was important to keep all the vehicles as stock as possible.

We spent countless hours training mired in deep snow. We practiced on Mt. Mansfield, Vermont's highest peak, where the steep "Smuggler's Notch" road is left unplowed all winter. We developed and perfected some very unintuitive, yet very effective, driving and winching techniques for deep snow.

Michael was big on everything being tested to its limits and pushed our sponsors particularly Warn and Pull-Pal to improve their products. Warn fitted extra heavy clutches and brakes to our winches. We ran 4 modified Warn winches;

View additional photos and original articles of the Mt. Washington Expedition.

www.roversnorth.com/info/16

one on the front of each vehicle and one rear mounted unit on the lead Range Rover. Winching long distances in deep snow proved very challenging. It was such a strain on the Pull-Pals we had to reinforce their shafts with heavy angle iron to prevent their destruction.

Another winching challenge we faced was when the vehicle briefly gain traction it would foul the slack cable in the drum. This would require us to immediately stop winching, or risk crimping the cable as it came back under load. So we developed these buddy lines. We attached a length of nylon rope at a point along the winch cable. This was managed by someone well off to the side but ahead of the vehicle. As soon as the winch cable went slack they would pull it tight again using this line. This allowed vehicle to progress uninterrupted. I remember it taking a lot of effort to dig out the Pull-Pal after the third vehicle used it.

I was the third vehicle, the support 110 with the extra weight. We started our ascent very early at first light to take advantage of the snow texture at dawn. Plus we were concerned about being able to complete the entire climb in one day.

The Mountain Road Company was also very concerned and having second thoughts. Our first planned attempt was scrubbed because of rescue efforts to recover a climber who had perished on the mountain the day before. No one gave us much chance for success so they were not excited about dealing with two disasters in a row. But we were ready.

The Range Rovers' Michelins were aired down to 10-12 psi and both vehicles got up on the piste almost immediately in the early light, but I could not get the 110, with its extra weight, to run atop the crust. Fortunately Harald Pietschmann had a lot of experience in desert expeditions and convinced me to drop the big Michelins down to 8 psi and up on the piste I went.

All was well for the first mile until we rounded the mountain into the full effect of a glowing sunny morning. The sun's effect on the snow's surface was instantaneous. We sank immediately and began the long periods of winch recovery.

We were fortunate to have a young Vermont start up clothing company Denali as a sponsor. They built us excellent inner and outer wear pants, fleeces and jackets that that ventilated and stayed warm in sub zero weather. We could not rely on our vehicles for comfort as their windows were usually down and we were constantly in and out of them. This was really grueling work, fortunately we were all in top physical condition. I kept our drinking water in an insulated cooler to prevent it from freezing.

The only time I had concern for our safety was when I saw the last steep stretch to the summit. I clearly remember seeing myself in the smooth black ice the wind had polished. Pewag was our [Driving School's] chain sponsor and had supplied the Range Rovers with their latest snow and ice chains, but had none for the 110. All I had was a set Randy lent me that he used for snowplowing with his 109. Fortunately my borrowed chains performed flawlessly.

The weather crew was relieved to see us arrive. They gave us a hearty welcome and a tour of their facility they man in two week shifts. The weather station was more like a bunker than a building built into the side of the mountaintop. We arrived on one of the few sunny days they experience during the year. The view from the observation window was clear all the way over the White Mountains of New Hampshire, over the Green Mountains of Vermont, across Lake Champlain and finally ending with a panoramic view of the Adirondack Mountains of New York. It was exhilarating to be there, to have actually made it to the top. ■■

L-R: Randy Botala, Mark Letorney, Charlie Haigh, Andrea Letorney, Lanny Clark and Mike Hopwood.

When camping with little people, we have found adding a roof top tent to our '98 Discovery has made us very loved parents. We reasoned that a tent would save us space, set up time and increase our comfort on the trail. In the Pacific Northwest, protection from predators of the African savannah seemed less likely. After months of planning and several scheduling bumps, I drove to Bend, Oregon and bought my husband, Jason, a rooftop tent for his 40th birthday. We would enter summer adventures in our Land Rover with cushier accommodations.

For our first camping trip over Memorial Day weekend we traveled 1/16th of a mile to the meadow below the house, thus avoiding the Memorial Weekend crowds expected at our regional parks. Jason and Colin spent the weekend tinkering with the tent. Colin brought out his

inner Tarzan, swinging from the Baja rack into the tent through its various doors and windows. Caroline and I enjoyed hot showers and food at the house and the nice campfire outside. That evening we all piled into our new roof top digs. On Monday morning we began to disassemble the tent—that's when the first complications arose.

The Disco no longer fit in the garage with the tent installed on top of the roof rack (and the OME 2" suspension lift to handle the extra weight). With its suspension lift installed, it had just squeaked in on first arrival home. What's happened? Folded down with bedding inside, the tent has suddenly become 2" too high to roll into the garage—and at 172 lbs, the tent also proved too heavy to lift off the Disco! Rover Girl knows her limits, and help or no, she's not lifting that tent. Thus the two engineers, one little and one big, commenced designing and

Tent By Kim Connoly Triumphant

building a rolling frame for the tent to rest on. The new frame and jack bolt arrangement slides out of the garage, encircling the Discovery. The tent is then jacked up off the roof rack, and after the rig pulls out from under it, lowered down to fit through the garage door. Voilà! And drat, my garage parking space has disappeared. Some family members declare the tent has taken its rightful place, but I will miss my “out of the rain” place this winter.

Our next test came over Father’s Day weekend when we headed east over the Cascade Mountains to Clear Lake. Shortly after we set up camp, the neighbors from you-know-where took over the adjacent site. Fortunately, we had dropped our erect/take down time from 40 to 10 minutes. Later that summer we headed for the Metolius River, famous for its fly fishing. We scored a prime riverfront spot and enjoyed a restful weekend watching other people fish while we hiked to the local hatchery and fed the juvenile trout. Trekking home we entered the tiny western-style town of Sisters, Oregon and hit the bakery for one of their famous pine cone donuts. The kids eyed the donuts; the men of Sisters ogled the roof top tent.

[Kim and Jason Conolly live in the foothills of the Oregon Coast mountain range with their two children. Faith, family, nature, books, coffee, chocolate, and dirt (in her garden) are some of her favorite things. After stints with a major publisher and the US Forest Service she’s working on book projects for children –ed.]

Kim Conolly’s Packing List for one 5-7 day excursion with kids

On the BAJA Rack:

- 4 Person Roof Top Tent
- 5 Gallon Milspec Gas (reserve fuel)
- 5 Gallon Milspec Water Jug (reserve water)
- Black Rubbermaid Bin for Garbage/Dirty Clothes

Inside the Rig:

- 2 adults and 2 kids
- VHF Ham Radio
- Books on CD
- Navigation/communication computer (with complete electronic copies of the Disco service manuals)
- DeLorme Gazeteer Map Book under the passenger floor mat
- OBDC Diagnostic tool and electrical meter
- Hand Tools, including mechanical and electrical tools and small parts
- Water bottles for each passenger (most with “sippy” type lids for convenience on rough trail)

At the Kids Feet:

- 2 Outdoor Emergency Survival Kits
- Portable HF Ham Radio and wire antennas for evening recreation and emergency communication
- Pulaski
- Shovel
- 2 Leveling blocks
- Fire extinguisher
- Journals and writing supplies

Below the Deck:

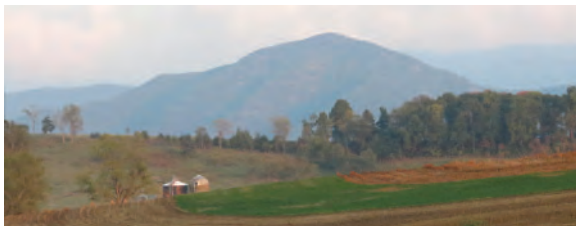

- 5 gallon tote filled with gas stove, fuel, small ax, water filter, rope, dishes, etc.
- Coolant and oil
- 5 gallon tote filled with dry goods and food
- Coleman Extreme Cooler filled with 5 days of food (utilizing ice frozen in blocks in quart milk cartons)
- Two 5 gallon water jugs
- 2 REI hiker chairs (for kids)
- 2 adult camp chairs
- 90% Sun shade cloth

On the Deck:

- 4 duffel bags/3 pillows (Colin leaves his pillow home, as he likes to rough it.)
- ALPS fold-up camp table

In the Rear Door Glass:

- Emergency First Aid Kit, stowed for visibility and immediate access

Twenty-eight years ago, the song “The Time of Your Life” closed out the movie *Dirty Dancing*. That song (along with all the hits that ran through the movie) kept running through my head during the October weekend of the Mid-Atlantic Rally, organized annually by the Rovers Owners of Virginia (ROAV). The MAR took place at the Wheatland Farm, just a few miles from The Mountain Lake Lodge, the locale for much of the film. Indeed, the 2014 edition of this iconic event provided me with the time of my life and plenty of moves by Land Rovers on the trails.

Wheatland Farm covers 700 acres on either side of Route 460; 100 acres that served as the campground and MAR headquarters and 600 acres that abut the Jefferson National Forest. Sam Moore’s father bought the property in 1966. Since then he’s continued it as a working farm [General Jeb Stuart’s family once owned the farmhouse], with a portion set aside as the Wheatland EcoPark, a public-private partnership to encourage sustainable business development to Giles County. Sam said, “I’m very pleased that ROAV has brought MAR to the farm. It has such a wide range of opportunities for off-roading. It’s really gone quite well!”

I joined enthusiasts from several states, gawking at the mountain views from the adjacent hillside that served as the event headquarters and campground. John Esser, Clifton, VA, drove his ’97 Defender 90 SW [plaque #53] 6 hours and enjoyed, “The beauty of mountains we saw across the road, which changed every sunrise and sunset with the mist and foliage.” The MAR organizing crew—Bob Steele, David Short, Chuck Yarborough, Mike and Nancy McCaig, Mike and Cyndy Boggs (“and Michael T. Boggs and his chainsaw”)—worked many weekends to carve new trails out of the muddy paths, steep rocky hillsides, fields and forests of Wheatland Farm. David Short noted, “Our greatest challenge for MAR had been to find a longer-term home for the event, and we’re thrilled that the hard work of creating trails will pay off for future MARs.” The hard-fought charting and clearing of trails paid off in a thoroughly-entertaining weekend. MAR offered off-roading from green lanes around the cattle fields, to forest glades, to hilly, rock-strewn paths that sent winches whirring out cable and line.

As I didn’t have the time to drive my Series II-A the requisite 1,000 miles from Maine to Virginia, I flew into Richmond, VA, where Jon Norton of Land Rover Richmond met me at the airport with a loaner LR2. The drive from the coastal plains to the hills by Charlottesville, through the Blue Ridge and Alleghany Mountains, offered spectacular scenes,

MAR

Dirty Dancing

even from an interstate. Plugging the address of my chain motel into the LR2's navigation system, it brought me flawlessly to the entrance, 235 miles from Richmond. It worked much better than the system utilized by United Airlines, which lost my bag filled with the warm clothing required by the 40 degree mornings. United claimed it "could not locate" the motel—actually telling the motel clerk, "There's no such address." (She urged United to give it the old Virginia Tech Hokies try and they found it 24 hours later.)

As I approached Wheatland Farms, the navigation system warned me that it could offer no assistance, but the "MAR" signs on Rte. 460 caught my eye. You entered a dirt path that headed up a steep hill, with several terraced areas offering campsites, each with a spectacular view. A large tent served as the event headquarters, the dining area for Saturday night's dinner and most entertaining auction; should MC David Short decide to leave his career as an emergency systems adviser and firefighter, television should come calling him as a game show host.

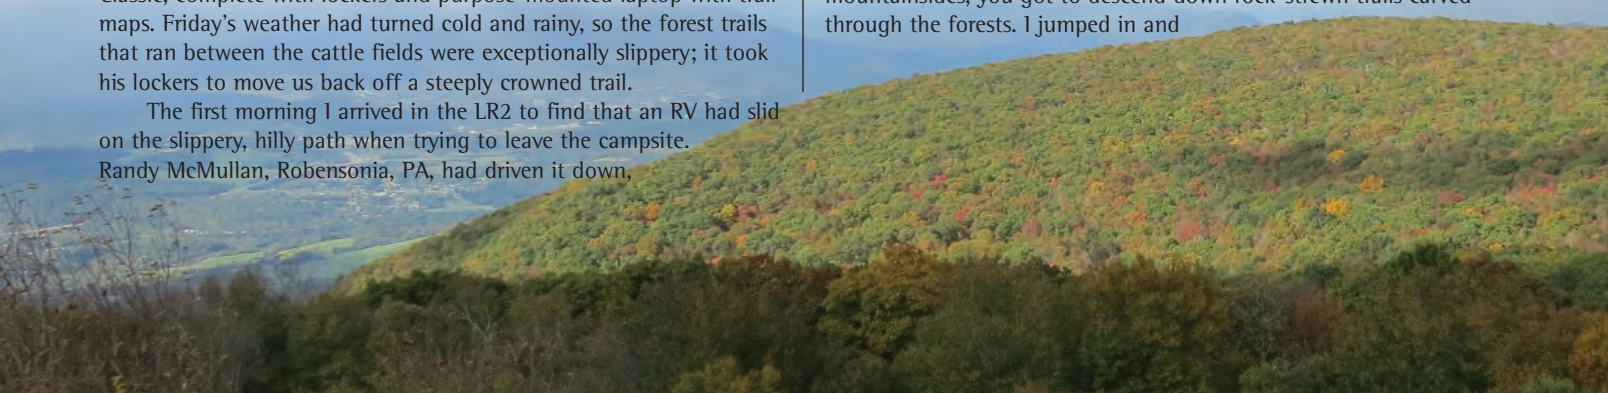

While the LR2 clambered up the slippery grassy hillsides with aplomb, I had promised Land Rover Richmond not to take it out on the trails. (I did, however, run up and down the hills gleefully!) So I hitched a ride with ROAV president Bob Steele in his '95 Range Rover Classic, complete with lockers and purpose-mounted laptop with trail maps. Friday's weather had turned cold and rainy, so the forest trails that ran between the cattle fields were exceptionally slippery; it took his lockers to move us back off a steeply crowned trail.

The first morning I arrived in the LR2 to find that an RV had slid on the slippery, hilly path when trying to leave the campsite. Randy McMullan, Robensonia, PA, had driven it down,

while his son Lyle followed in his bare-bones Series II-A. As the RV blocked the one access path, several Land Rovers had sprung into action to first pull the RV gently out of the woods, and then forward out of the field and onto the main road. The range of trailers, "Tent Mahals," and pop-ups that housed the 100 attendees ran the gamut from bespoke to elementary. I shamelessly cadged breakfasts each morning, just by performing my best "starving writer" routine.

The weekend included a trek up some 4,000 feet of fire road tracks that took the convoy past a fall foliage palette of stunning colors and eventually, to an abandoned forest fire watch tower with a spectacular view of 30-40 miles of the Virginia-West Virginia border. By the time we reached the summit, we ran into snow flurries. A second trek of a few hours, this time in Mike and Cyndy Boggs' '93 NAS Defender 110, took me up narrow forest trails that eventually led across the state line into West Virginia. To pop out of the woods, seeing only old growth trees, and suddenly come across rural homes, to a paved road, and find yourself about 35 miles from the MAR campsite, was rather impressive.

The weather alternated between drizzle and sunshine; that assured some nice water crossing and mud holes that kept the winch kits open and active. It also meant that once you ascended up the mountainsides, you got to descend down rock-strewn trails carved through the forests. I jumped in and

out of a wide variety of Land Rovers. Their range ran from Series II-A's to Defenders, Discoverys to Range Rovers; it was equaled only by the generational range of participants. The little kids running around the fields had as much fun as the older kids driving their Land Rovers throughout the mountains.

Mike McCaig offered his Penlan Farm in Crozier, VA, for the first MARs from 1994-98. When the event attendance exploded to 400, it moved to larger venues in eastern Virginia. After 20 years, it's a smaller event, but the Wheatland Farm site promises a healthy future for this veteran rally. Bob Steele remembered, "I saw my first Defender in person at the '96 MAR. We're seeking to grow this event so that we can appeal to enthusiasts of all the Land Rover models."

Fueling up the LR2 for its trip back to Richmond, I stepped inside the local convenience store to pay. The clerk looked at my Rovers North shirt and said, "Are you with the Land Rover group? We saw them everywhere. Y'all come back now." Maybe Virginia's marketing slogan needs to change to "Virginia is for Rovers." Set aside the first weekend in October for this spectacular locale. Trust me, you'll have the time of your life. //

Land Rover Richmond

By Jeffrey Aranson

Matt Bigelow, the General Manager of Land Rover Richmond, proudly proclaimed he's a "Buffalo native and a huge Bills and Sabres fan." Still, with 6 feet of snow falling last November, he might be happy that he made the move to Virginia.

After graduating from Canisius College with a degree in political science, Matt spent a decade as a fundraiser for nonprofits. In 2002, he bought a '98 Discovery and later gave it to his daughter as her college vehicle. By February 2003, he changed careers and began working at Land Rover Richmond. And yes, the Discovery is still in the family.

Matt evinces a genuine enthusiasm for the marque. "I have a real love of Land Rovers," he said, "which is why I decided to change paths and start working here. I really love the history, the heritage and tradition of Land Rover. It was fun to start here and is still fun to work here." He's enjoyed his contacts with the Rover Owners of Virginia and the dealership supports the club and the Mid-Atlantic Rally.

It doesn't take long in conversation with Matt to understand why he says, "I really have a great crew." I couldn't meet everyone, but Parts Manager Herb Bailey, Sales Guide Johnny Cates and Detail Manager Jon Norton demonstrated they really know and like their Land Rovers. As Matt noted, "Land Rover is quite unique. It's a 'story' brand that transcends all socio-economic boundaries."

Land Rover Richmond recently underwent renovations that moved it away from the '90s L.L. Bean/Orvis hunting lodge look to a more contemporary design. In becoming more urban and sleek it has not forgotten its roots—an "adventure center" wall still features off-roading DVDs, and a "heritage wall" visually outlines the family history all enthusiasts love to see and know by heart. Another wall houses a full range of outdoor Green Oval clothing, and outside the modest-sized sales building, the first-ever Land Rover Centre off-road course still stands ready to thrill new Land Rover customers and entertain veteran owners.

A plaque on the wall from Land Rover North America celebrates the awarding of the franchise in October 1988; that's just a year after the first national dealer event. Twenty-seven years later, it's evidently still enjoyable to be a big part of the Land Rover community in Virginia.

Text and photography by Nicholas Bratton

Panting from the scramble up a steep hill, I pause to catch my breath and take stock. Winch rope in one hand, tree strap in the other, three pounds of cloying mud glommed to each shoe, and a couple of stuck Rovers below—the Northwest Challenge had lived up to its name. As teammate Lar Malleis crested the hill, his smile mirrored my own. This was what we had come for.

A gathering of Land Rover enthusiasts from British Columbia to Oregon, the 25th year of the Northwest Challenge combined off-road driving, navigation, problem solving, mechanical knowledge and special tasks. As usual, this edition featured varied terrain, demanding tasks, and sunny skies over the three days of competition. Given the organizational complexities, hosting alternates between the Pacific Coast Rover Club and Rover Landers of British Columbia; the venue changes among BC, WA and OR. The PCRC's Mike Bach ran this year's event. Assisted by a team of dedicated volunteers, he ensured that the Challenge was demanding, creative and required a broad range of skills to succeed.

The entrants shared the organizers' enthusiasm. Hailing from Portland, Vancouver, and places between, the twelve teams drove Landies of many flavors: two Defender 110s, three Defender 90s, two Discoverys, four Range Rover Classics and a Series II-A hybrid. They ranged from stock to heavily modified for off-road; the Challenge would put them all to the test.

Washington is blessed with spectacular terrain accessible by public trails. This year's Challenge took competitors through dense evergreen forests, along windswept ridges, over 4,000-foot passes, around the base of Mt. Rainier, over broken basalt moonscapes, and through the dusty steppe of central Washington—a paradise for Land Rover enthusiasts.

[Nicholas Bratton, Seattle, WA, developed a passion for Land Rovers at age 6, crossing the Kalahari with his family in a Series II-A 109". His travels include 5 years in Africa, a year in Europe and expeditions to Greenland. He pursues writing and photography with his wife Jenna, their dog Bastien and a '95 Discovery LSE -ed.]

25 Years of NW Challenge

Competition commenced en route to base camp on Friday. Teams had to navigate to coordinates where they would find information about the history and geography of the area. This provided clues to solve problems, whose answers revealed the locations of hidden caches that teams needed to find over the weekend. As the sun sank into the trees the teams gathered for a briefing from Mike, who welcomed everyone, explaining the competition and evening's activity.

Teams paired into groups of two vehicles and set off with a list of coordinates. Near each waypoint a painted marker was hidden, assigned a point value based on how well it was concealed and how difficult it was to reach by Rover. The central task of the Challenge was to score points by finding concealed markers. Lar and I partnered with Gord'n Perrot (one of the original organizers and owner of Seattle's Lamorna Garage) and his navigator, Cary Wright. Over the next few hours we drove the length of the historic Naches Pass trail in darkness, pausing frequently to scamper into the undergrowth in search of markers and occasionally encountering other teams. We also found the hidden cache at the pass containing more clues for the next day's tasks.

Gord'n Perrot negotiating the trials course.

Background: Magnificent view from the top.

L-R: Gord'n Perrot clearing the trail, slightly modified Land Rover for Challenge Events.

A misty morning greeted everyone on Saturday. Upon receiving several more pages of coordinates, the competitors learned of four mandatory tasks we would have to find and complete during the day. Fortunately, the first two of these were near camp. In one, teams had five minutes to sort through a pile of parts and identify which model Land Rover they belonged to. The second was orienteering, which required determining the azimuth of a known point using a magnetic compass and estimating the distance to it.

Having reviewed the coordinates, we realized they were grouped in clusters many miles apart. There was no way we could find them all in the 12 hours allotted, so we prioritized quality over quantity and went for the highest value waypoints. This meant negotiating the most difficult terrain. Off we set and soon found ourselves bouncing up Kaner Hill, winching up Aardvark Hill, and crossing rickety log bridges near Lilly Pond in our quest for points.

By midday we reached the next group of tasks. First was a trials course in which the driver had to pluck tennis balls from stands and

match the unknown time of the driver who set the course. Second was a medical scenario in which teams had to treat a member with a simulated broken leg. The afternoon took us further afield through stunning landscapes in search of a mandatory checkpoint. We faced a conundrum: should we go for the checkpoint, or seek out high-value markers? We went for both and raced against time to return to camp as the sun set.

A cast-iron pot of hearty chili steaming on a fire awaited the teams as they rolled into camp plastered with mud, exhausted and smiling broadly. It felt great to sit still, not bouncing or running, and share tales of the day's adventures around the fire with fellow Rover enthusiasts. Some vehicles had not made it through the day unscathed, but with enterprising spirit teams made field repairs.

Sunday morning brought the final task. In a nearby rock quarry the volunteers had marked out a trials course. The catch? Drivers had to negotiate it in pairs of trucks connected by rope or tow strap. Points would be deducted for stopping, reversing, striking cones, or if the

Right: Drivers negotiating in pairs around the trials course.

Background: Sunday morning trials course with a catch!

connecting line touched the ground. Some teams took creative license in configuring their connecting line, but only one team drove the course cleanly. After a group photo, everyone returned to camp for lunch and closing ceremonies.

Teams received awards based on winning individual tasks and overall scores. Thanks to their intensity, skill, and persistence, Gord'n and Cary earned first place in their "ORange Rover". The array of prizes was impressive. Sponsors and donors had furnished a valuable array of accessories and tools for the winners. Special thanks are due to Rovers North for their generosity, as every team went home with something useful. Recognition is also due to Mike Bach and his fellow volunteers from Pacific Coast Rover Club, who put together a superb competition to celebrate the 25th anniversary of the Northwest Challenge. I'm already looking forward to next year. 🍷

Letters to the Editor

Dear Rovers North,

I have been a Rovers North customer since 1985, when I bought my first Land Rover, a 1965 109" Dormobile (aka "Reggiebwanna"). Reggie is/was the beautiful siren that infected me with "greenovalitis"; apparently I contracted the incurable form of the disease. I still drive, camp in and just stare at it regularly.

I bought a 1988 Range Rover in 1990, (it wasn't called a Classic at that time). I drove it for 12 years before letting it go to a friend,

who still has it. No, I did not encounter a single "Prince of Darkness" issue my whole time with the car. My son drove it to high school for the last four years we owned the car. Sometime during that phase, I noticed that the lettering across the back no longer read "RANGE ROVER", but instead "HANG OVER". While I appreciated his genius with the lettering, I was more appreciative that the local police kept a closer eye on my truck after that.

Around 1992, I found a desolate 88" II-A ragtop tied by a rope to the telephone pole behind my office. Murphy (the only name he would answer to), stayed with our family until my son left for college. Realizing that my son and I would never team up on a concours rebuild, Murphy helped to pay for a bit of college expenses.

In '97, I bought a two-year-old Coniston Green Defender 90 SW. I drove it for nine years, and then had one of the worst lapses in judgment in my entire life—I sold

it. I guess I always wanted to say that I sold something for more than I paid for it, and suppose that was prominent in my feeble mind at the time. The fact that I can now say I made money on a vehicle DOES NOT make me feel any better, but buying a 110 as a replacement did.

Thanks for all the advice, fellowship and Genuine Parts.

Richard Poole, DMD
Madison, MS

[Land Rovers are just what the doctor ordered. Thanks for sharing your experiences with our readers -ed.]

Dear Rovers North, I've been a customer of Rovers North for 10 years now and you guys have supported my Rover habit all the while. The first photo was taken in 2005, when I first purchased the 1963 Series II-A. My kids were ages 3 and 4. The second photo was taken a week ago. As you can see my kids have grown up with that little truck! It's a little bittersweet, but I just sold the II-A and have replaced it with a 110 named "Tithonus". The new truck arrived about two weeks ago from the UK. Of course, I am still purchasing the majority of my parts from my trusted friends at Rovers North. Thanks to all your helpful staff; you folks do a wonderful job!

Jonathan Sayer
Austin, TX

[How fortunate for your family to grow up with Land Rovers! Thanks for sharing the photos -ed.]

Dear Rovers North, We would like to thank all of you at Rovers North for your past sponsorship and generous support of the Arkansas Rover So-

ciety. We appreciate you helping make our rallies a success! We really enjoyed having Les Parker at last year's rally.

We're looking to confirm October 2015 for the next Arkansas Rover Rally at Hot Springs ORV Park. We invite you to once again be a part of our exciting Land Rover venue through rally sponsorship. Have a wonderful week.

Nigel Et Kimberly Jebb
Arkansas Rover Society
Jacksonville, AR

[We wish you every success with the 2015 edition of this great event! -ed.]

Dear Rovers North,

I have been a proud Rovers North customer for over a decade. Your customer care, dedicated and prompt service, Genuine and ProLine Land Rover parts availability and outstanding Rovers Magazine make Rovers North the #1 choice for me and all Classic Land Rover and Range Rover owners. I currently own a beautiful 2004 Land Rover Discovery SE, with a mere 9,000 original miles, and a wonderful 2012 Land Rover LR2. The Land Rover LR2 amazes me with its versatility, reliability and overall quality.

I have been collecting your fine publications since your newsletter was called Rovers North News. The latest and greatest Rovers Magazine is one of the few publications I receive that I truly look forward to reading from cover to cover! I enjoy your enthusiast profiles, such as the article on High Meadow Farm, and your vehicle road tests, like the article comparing the 2013 and 2014 Land Rover LR4. It's also nice to have a selection of your parts and accessories included in each issue of the magazine. Keep up the great work on this treasure for all Land Rover/Range Rover enthusiasts! Thanks to the Rovers North Team for everything you do to keep our Land Rovers and Range Rovers running smoothly.

CPT Sean J. Donohue
Lake George, NY

[Thanks for letting Rovers North be a part of your Land Rover Experience and for your compliments on Rovers Magazine -ed.]

Dear Rovers North,

I just wanted to say hello and thank you for the efforts of your editorial work and beyond with Rovers Magazine. I have been a fan of these cars since seeing the movie Born Free and seeing Marlin Perkins ride around in them on Mutual of Omaha's Wild Kingdom. Okay—going back here a ways. I did obtain a 1963 109" II-A in New Hampshire a few years back and have been enjoying the car. It's in pretty good shape mechanically and looks decent as well. It has a safari top on, but I think it would be more fun with canvas.

Richard Ford
Wakefield, NH

[Thanks for the compliments on the magazine and for letting Rovers North help you enjoy your 109" -ed.]

Dear Rovers North,

Yes, that be The Stonehenge in the background and an '84 Land Rover 90 in the foreground. The guards wouldn't let me drive it any closer, something about an American movie with Chevy Chase in it or something. Nice chaps, otherwise.

Eric Wolff
Newport News, VA

[The movie might be the new Vacation -ed.]

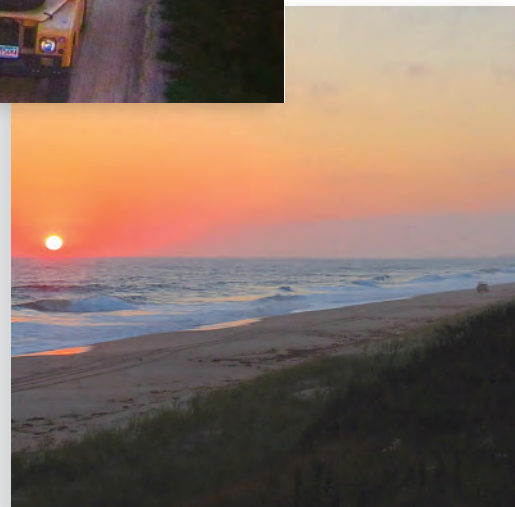

Dear Rovers North,

Considering almost every part on this rover came from you guys I thought I would share these photos. A buddy was married here on Nantucket and asked me to drive him and his bride out on the beach to the steps of the reception. It was amazing!

Mason Kennelly
Nantucket, MA

[Yet another romance-turned-marriage thanks to a Land Rover. Congratulations to the lucky couple! -ed.]

Behind the Steering Wheel

Story and photos by Jeffrey Aronson

"We wanted an adventure." Eschewing common sense, they turned to Ebay and lost out on bids for a Ford Bronco II and a VW Super Beetle convertible. Then their MGB beckoned them in Syracuse, NY.

It looked like fun and the top bid sat at \$2,100. If you've trolled Ebay, you know the ads get a little hyperbolic. This seller merely claimed, "It runs, drives and stops," and that, "Most of the gauges work."

He'd owned the car for only a couple of months and had not added to its 91,000 miles. Felipe remembered that, "We must have asked 20 questions and he answered two." After "winning" the bid, they hopped on a bus to pick up their new cross country car.

Felipe and Briston had a limited travel budget and thus limited drive time. They stopped at Peter Cosmides' MotorCar Garage in New Jersey while on their way south. Between the online network of Land Rover and MG enthusiasts, minor foibles were handled

easily and they enjoyed their trip

through Florida, and then west to California. Oh, and after they arrived in the Napa Valley, they decided to take a Labor Day weekend side trip to Vancouver, BC via Portland, Eugene and Seattle. The MGB has not had any significant work since its purchase 5,000 miles ago, and now serves the poster child for their new business, Vineyard Tales (www.vineyardtales.com).

A couple with no automotive experience whatsoever bought a hardscrabble, 91,000 mile,

45-year-old MGB with no service history and took it 5,000 miles cross country. So yes, you can—and should—take that new-to-you Land Rover anywhere.

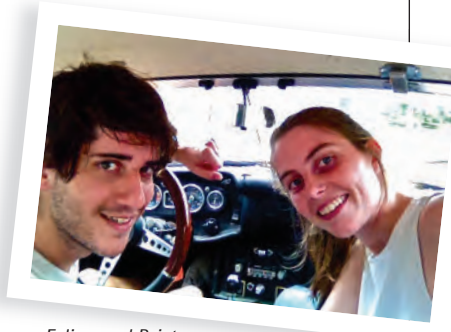

One Christmastime some members of the very informal Downeast Land Rover Club met at the Sebago Brewpub [surprise!] just outside of Portland, ME. I invited Dave Michaud and Shelby Johnson, who had just purchased a '97 Discovery, to join us. Dave and Shelby really loved the Discovery, purchased after local enthusiast Bob Vail had crawled all over it, but wondered about an upcoming trip to Keene, NH. "It has around 100,000 miles," said Dave. "I'm nervous about taking it on such a long trip."

Heads turned around the table. I mean this is a group that has rebuilt a Series Land Rover over a couple all-nighters and then headed out hundreds of miles to off-road events. In terms of overall condition and mileage, Dave and Shelby's Discovery stood far above those driven to the pub. Any one of us would have taken that Discovery way beyond the 300 mile round trip to Keene.

Their question was a common one. If Santa brought you your first "new-to-you" Land Rover, it likely came with high mileage and a general air of "what might go wrong next?" Unless your mechanic's, or mechanical friend's examination [you did have someone knowledgeable look over the Rover first, right?] showed obvious flaws, the only way to find out is to drive it. Fearful of a breakdown? Think about this story first.

Last July I met Felipe McAlister and his girlfriend, Briston Sullivan, both 26, at Leyland British in Kennebunkport, ME. I watched them crawl out of a rough '70 MGB, stuffed with luggage, four new tires, and running New York license plates. Their MGB had wire wheels and proprietor Erick Van Sickle knew how to mount tires on them. Figuring the couple might be summer residents, I asked where they were headed. "Napa Valley, California," Felipe replied. That's cross country in "Penny," a 45-year-old, British Leyland-era MGB.

Since they lived in New York City, they'd never owned or worked on a car. Felipe had left his job as a proprietary bond trader and Briston had left hers in advertising and marketing. They spent four months traveling through Asia before deciding to start their new lives in California's wine industry. They decided to buy their first car together because,

Felipe and Briston

Until recently, my Series II-A had suffered the slings and arrows of island wisecracs alone. Then, to my delight, a Series III 109" ex-military showed up with its owners, Ryan and Alyson Flemming, both chefs at a new restaurant. It also provided fodder for a new wisecrac, restaurant staffer and volunteer EMT Jessie Cochran. She spied the two Land Rovers in a parking lot and in a snarky voice pronounced, "they look cute together."

When not creating outstanding dishes, Ryan likes to work on his Land Rover. But a chef's schedule and Maine weather don't leave much leeway for basic maintenance. Of course, the moment I saw his Land Rover and found out about their move, I introduced myself and offered assistance.

Generally speaking, when I "offer assistance," experienced Land Rover enthusiasts run for the hills. For someone who thinks he knows a lot about Land Rovers, I've chronicled a lot of breakdowns and outdoor repairs. Ryan, however, did not know better when he called to see if I could assist him on changing out a brake line. I had visions of something simple, but since his Series III had the dual circuit brake system, replacing a front brake line—in a dirt parking lot—proved to be a bigger headache. Once uncoiled, the new brake line from the shuttle valve to the wheel cylinder could be shaped into the weird curves required, but for some reason his shuttle valve had a larger threaded hole than the screw-in fitting that came pre-installed on the Genuine Land Rover part. We would need to cut off the old fitting and have it flared onto the new brake line.

Here was a chance to introduce Ryan to the quirks of small island living. We have three auto mechanics, two full-time and one part-time. One had closed up for a medical appointment, one was out lobstering, but Jacob had the right sized flaring tools and did the job for \$10. I slid under the Land Rover and buttoned everything up. Happily, it did not take many pumps to bleed the system effectively.

While the Rover would stop quickly, a week later it would not start. The battery ran down churning the starter motor and did not seem to hold a charge. Along with the spark plugs, the battery had been replaced a year ago. A multimeter showed that the battery had 12.3 V, but that it quickly fell below 12 V with just a few turns of the key. What would drain the battery that quickly? A bad starter would, but fortunately, I discovered the battery simply had little water covering the plates. Now onto problem #2. When we hooked up jumper cables, it cranked but would not fire. So I pulled the cap and rotor [both looked ok] and had Ryan fire up the engine. The points never opened or closed—time to set the points. Using his hand crank, we turned the distributor shaft until the points rested on a cam lobe. After gapping them with a feeler gauge it fired right up—and sounded quite smooth. Ryan said it had never started that easily. I was just relieved that I didn't make anything worse. Two days later I breathed a sigh of relief

when I saw his Land Rover in a different location—yes, it actually moved and for a change my repair had worked!

So now my brake lights stay on whenever the ignition is on—here's hoping that repair will be as simple.

Responding to an EMS call last winter, a friend's SUV slid into a ditch. As it was on a remote part of the island with no cellphone service, she appreciated the OnStar service that came with her car so much that she wound up appearing in an advertisement for General Motors. This incident popped back into my head as I read again of the increasing connectivity between contemporary vehicles and the internet. Consumers expect more than maps and music from their in-car hard drives they want the information and applications that arrive via the internet. They're spending more time in their vehicles than ever before and they're demanding greater connectivity. Then there's the other push from US government agencies that want to require vehicles to send messages to each other in an effort to reduce accidents. As one tech expert noted, when you enter your vehicle, "You're stepping into a rolling computer now."

Land Rover has come up with an interesting feature for contemporary motorists. Starting later this year with the Range Rover and Range Rover Sport (and later with all models except the LR2), you can order the *InControl Remote* and *InControl Protect* systems for your Land Rover. They run through built-in SIM cards and as an app available for Android or Apple phones. Inside the car you'll find a button for an "SOS Emergency" call, or the system will initiate it automatically in the event of an airbag deployment [dependent upon phone coverage]. And, "in the unlikely event of a breakdown," Land Rover has included a button on the overhead console (or directly from your phone app) that will provide "optimized roadside assistance." The GPS will let the system know of your location.

Among the remote features in the app will be the ability to determine whether the doors and tailgate are locked, the amount of fuel in the tank, the available range, directions to your car if you've parked in an unfamiliar area, low tire pressures or low washer fluid. The app can also track mileage for those pesky business expense accounts. For those who don't want to be tracked, the system does not transmit your location unless an accident occurs or you call roadside assistance.

My Series II-A becomes a "rolling computer" anytime I bring my laptop back with me. Marginal cellphone service leaves me with a "dumbphone" that identifies my location as "lost." I never lock the doors and you know when the tailgate is closed by the Jacob Marley-like rattling of the chains. As for tracking mileage, well, first I need an expense account. Lastly, if I wanted to remain anonymous, I wouldn't drive a Series Land Rover. ■■■

Burke's Corner

[Bill Burke, Grand Junction, CO, one of the foremost off-road instructors in North America, offers his advice on selection of cold weather supplies —ed.]

Cold Weather Awareness

Why, on the coldest days of the year, do we resolve to do anything except sit around the fire watching the wood burn? Some readers in Key West or similar locales will watch sail boats float by or polar bears cavort at the San Diego Zoo. The rest of us will prepare for the very real chance that the ice we see will not be floating in a cocktail glass but underneath the tires of our Land Rovers.

Cold weather demands changes in our off road rituals. I've got my tire snow chains all ready for use; my warm gloves, extra heavy duty long undies, over-pants and my Loki protective gear all sorted—and it's not just because the plastic windows don't fit the top of the Defender anymore. I've got my Bug-Out-Bag changed over for the winter season and the winter "survival can" packed into the back of each Land Rover.

Public Service Announcements often remind us of the simple things to keep us safe if that feared incident happens; for example, the slide into the ditch, the snow plow buries our car and we have to survive on our wits and whatever's inside in the Rover. Simple things like a sleeping bag/wool blanket, coat, gloves, socks, emergency radio, jumper cables, flares, spare fuel, shovel, those cool little hand warmer thingies will make all the difference. There's no such thing as bad weather—just insufficient gear and poor choices in clothing.

If hiking out immediately is not an option, survival can depend as much on the way in which we utilize the terrain as on the materials a traveler has available. We can live three weeks without food, three days without water, but only a few hours without shelter. Shelter and water are more important than food—stay with the vehicle if possible. Think again before you leave the shelter of your Rover. Don't forget to clear the snow from your tail pipe. Keep the radiator and engine compartment free of clogging snow, slush and debris. I have seen snow packed engines overheat in extreme low temps—yes, overheat.

A simple homemade survival kit can be packed into an empty 3 pound coffee can, or some nesting camping pot with a strong-sealing lid. The can, in addition to being a container for the survival supplies, could be an improvised kettle for melting snow and/or heating food! In an emergency, before you fill the can, punch three holes around the top edge of it in a triangular pattern. By fastening a cord, string or wire

(stored inside the can) through the punched hole, it can be used to melt snow, heat soups and water if stranded. You could, for example, hang the can from the rear view mirror and leave enough string

so a candle or canned heat on the dashboard, transmission hump, or center console, directly under the can will heat its contents. Of course, modern technology gives us the Esbit folding stove, Tommy Cooker or the Jetboil (Be aware of CO poisoning and ventilate any flame)

This kit should be inside the vehicle as the trunk or door could be jammed by collision or buried in the snow.

Keep these supplies in the can:

- * Matches, several 'hurricane' candles and/or canned-heat
- * Small sharp knife or multi-tool
- * Facial tissue, paper towels and toilet paper
- * Large size plastic garbage bags (use for rain or wind protection, or as a container) Also you can cut a hole in the bottom large enough for your head and wear it as a poncho.
- * Safety pins, spoon/spork, aspirin (labeled), pencil stub, plastic whistle (note: whistles are 'directional'—use your hands to help direct, and the hole is to drain your spit—so the hole usually goes down!)
- * Flashlight (non-metal) with batteries kept outside of the flashlight to avoid corrosion. Batteries work best if they are warm, by the way.
- * Tape coins under the lid for payphone calls or vending machines and fold a bunch of dollar bills in there.
- * Compass—even a toy one works to point north
- * Small wire and/or string, or parachute cord
- * Small roll of duct tape, rolled up 'survey' tape
- * Snacks to nibble on to help keep morale up, semi-sweet chocolate, raisins in small packages, energy bars like Lara/Cliff, wrapped hard candy, honey sticks, instant broth/soup packs, canned meat/tuna.

Remember that the stored can and its contents will be exposed to the elements—freeze/thaw cycles—while in the vehicle over time. Do not include items that will be compromised by this action or that may burst open.

In addition to the above items, mittens, scarf and stocking cap may be tied around the can with 50 or more feet of parachute cord or strong nylon string. If you must leave the Rover the cord can be tied to the vehicle and then, to yourself, so you can find your way back.

This kit and these suggested items should provide you with a starting place; you will need to add your own spin on this kit. Things like water filters, first-aid kit, communications devices and locator beacons are all good ideas to have along. Things that rely on batteries will eventually run down... don't count on technology for survival. Count on yourself, your learned skills and common sense.

People talk about using the bonnet of a Rover for shelter or transportation but that requires you have to have tools to remove it. You must also have the strength, energy, and ability to remove the bonnet. Don't be fooled by those TV shows. If you are really intrigued by learning solid survival skills check out the Boulder Outdoor Survival School in Utah or look into some of the National Outdoor Leadership School courses or some of the "bush craft" schools like Jack Mountain in Maine.

Staying with the vehicle is the smart thing. It is the easiest to find and can be a source of survival items. Tie a bright cloth or surveyors tape on the top most antenna, or use a stick attached to the body so it can be seen above the potential snow drift the vehicle may end up looking like! Even a Hi-Lift jack handle can be used to allow fresh air to move about. Your survival will depend on you remaining calm, exercising caution and being patient.

Assess the immediate environment for its utility. Trees provide wood for fire and shelter. Tall grasses or shrubs become natural wind breaks. If there's the potential for avalanches, resist the temptation for open country travel. Prioritize your actions in order of importance: shelter, water, warmth.

Eating snow can be dangerous for survival. Snow will chill you if eaten cold. If it can't be heated, put it in a cloth and let the moisture soak through and sip or drink that. Too much cold snow in your mouth can cause stomach cramps. Stay away from alcohol and/or soda. They increase dehydration and the short term warmth is not worth it.

Again, be patient—just hunker down for the night or duration. Maybe that headliner will finally get pushed back into place! Time will

pass and it will be safer in the daylight to re-assess your situation. Make sure your Rover is running righteous, has the good stuff recovery gear and is always ready "to go" when the stuff hits the fan! Make sure your spares kit is up to snuff also. Remember that chance favors the prepared mind!

There, whew, my first completed resolution of the new year... get this column wrapped and in the can! Looking forward for another great year with you wonderful Roverphiles! Take care, Happy New Year, see you on the trail! BB //

Safety Devices®

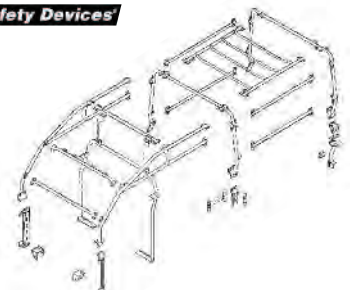

ROLL CAGE FULL EXTERNAL DEFENDER 90 HARDTOP

6 point full external bolt-in roll cage for vehicles with bulkhead. Please note that models between 1983-1988 had three raised ribs on the roof approx. 22mm (7/8") tall. This kind of roof does not work with our external roll cages as the hoops will clash with them. Finished roll cage provided with black powdercoat paint finish unless specified otherwise. Other colours available: grey, blue, silver, white and red. Roll cage can be provided unpainted by special request (no reduction in price). Made in the UK by Safety Devices. **RBL1087SSS \$2950.00**

Safety Devices®

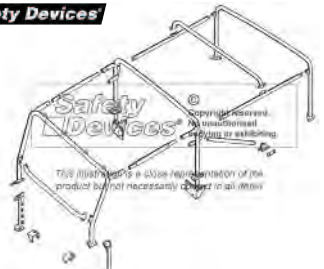

ROLL CAGE FULL DEFENDER 110 NAS SAFARI

8 point multi-point bolt-in full external/internal roll cage. Mounts to the chassis at 6 external points. Please note that models between 1983-1988 had three raised ribs on the roof approx 22mm (7/8") tall. This kind of roof does not work with our external roll cages as the hoops will clash with them, nor will it fit if the rear seat box is stepped in the rear corner. Finished roll cage provided with black powdercoat paint finish unless specified otherwise. Other colours available: grey, blue, silver, white and red. There is a surcharge for colours other than black. Roll cage can be provided unpainted by special request (no reduction in price). Total weight of roll cage including fitting kit: 124.5kgs. Installation time: approx 20 hours. (2 people, 1 day). Roll Cage by Safety Devices. Fits: Defender 110 Station Wagon 4-door (1983-present) **RBL1727SSS \$3499.00**

Safety Devices®

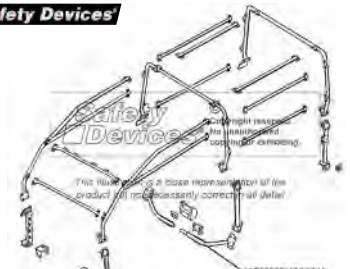

ROLL CAGE FULL EXTERNAL DEFENDER 90 SOFT TOP

8 point multi-point external/internal bolt-in roll cage. Utilises existing hood which will need modification. Front legs are NAS style. Finished roll cage provided with black powdercoat paint finish unless specified otherwise. Other colours available: grey, silver, white and red. Roll cage can be provided unpainted by special request (no reduction in price). Roll Cage by Safety Devices. Fits: Defender 90 Soft Top 2-door (1983-present) **RBL1887SSS \$2895.95**

Safety Devices®

ROLL CAGE FULL EXTERNAL DEFENDER 110 2 DOOR

Full external multi-point bolt-in roll cage. Made to NAS Specification. Finished roll cage provided with black powdercoat paint finish unless specified otherwise. Other colours available: grey, charcoal grey, silver, white and red. Roll cage can be provided unpainted by special request. Roll Cage by Safety Devices. Fits: Defender 110 Hard Top 2-door (1983-present) **RBL1907SSS \$3199.95**

Product Information

EXT371-BV

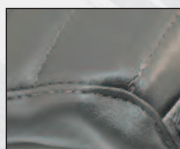

Standard Front Seats in Black Vinyl

Exmoor Trim produce a range of Series II-III seating that is simply as good as it gets. The front seat cushions and squabs use modern high quality foam, have superb feel and ride. Fitted with the metal back plates beautifully reproduced as original and not with a substandard wooden frame—an important safety factor. The Standard, Elephant Hide and Deluxe seat backs are supplied with new pivot bolts, nylon washers and locking bolts, if you require leather retaining straps then these are available separately. Seat belts not included, see page 48.

Product Information

EXT371-EHG

Standard Front Seats in Elephant Hide Grey Vinyl

seating was introduced into mainstream Land Rover production in 1954, and used to great effect in the Series II and IIA interiors.

At the time there were on average 1700 Land Rovers rolling off the production line a week. Taking in to account model variations and seating types, the result was over 1000 seats a day going through the exceptionally busy trim shop. We now have a material that's a superb reproduction and gives all of the features that are so important if restoring these historic vehicles. Now manufactured with modern quality vinyls that give the same effect and long life as this classic material has done for over 40 years. Seat belts not included.

Product Information

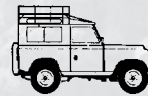

Deluxe Front Seats in Black Vinyl

This style of deluxe front seats was used throughout the production run of the Series III Land Rover with its distinctive sculptured design and face fluting running from front to back in the centre panels of the seats. The centre seat back mounts with pin type fittings and the outer seat backs mount with fixing bolts that use internal threads for securing upright into adjustable trays.

Product Information

Defender Standard Front Seats

The Standard Defender front replacement seat from Exmoor Trim is supplied complete with runners and all fixings. This is a direct replacement seat for the original front seating used up to 2007 in all Defenders. The seat base is removable, the headrest is adjustable, with reclining seat backs, rear pockets and smooth sliding runners. Don't settle for less, safety matters. Approved by Vehicle Certification Agency (VCA). Mark 1 Impact Tested (Millbrook Testing Ground). Approved worldwide and certification supplied with every seat.

Add Factory Installed Heat or Lumbar support to any seat, see p55.

Defender Front Seat Retrim Kits

Exmoor Trim offers the Defender front seat kit as an alternative to replacing your entire front seat. This kit has been assembled with the vehicle restorer foremost in mind, allowing the individual to replace all the important external and internal small components that make all the difference to the finished job.

These kits only use OEM Denim and OEM vinyl sides and rear materials. The Retrim kits include all new foams and seat & headrest covers and spray adhesive. You are guaranteed to be able to strip your seats down, restore all the seat base foams and the covers in the knowledge that all the seat components you need to finish your seat restoration are to hand.

NEW
Extended Defender Outer Seat Base

These new longer seat bases give superb support under your legs with standard raised sides for easy access.

A direct replacement for standard seat bases, these are now available in all fabric options shown on page 52.

To Install you simply clip out and clip in the new extended seat base it could not be easier. This is just what every Land Rover owner needs, a bit better support on and off-road which you get with this high grade moulded internal foam for long life.

These do give very good support for your legs and more so for the taller driver, coupled with our seat risers purchased separately to make a very good package.

Fits all Land Rover Genuine seats and Exmoor Trim Defender front outer seat assemblies.

The Defender Elite Seat MK2

Product Information

is our most popular front seat for Series and Defender models. The Defender Elite seat has unsurpassed comfort, support, style and hold. Raised bolsters in the seat bottom and back give excellent longitudinal hold. A higher back also adds to superior comfort and support with advanced lumbar support. Reclines with adjustable twin stalk headrest and removable seat base for battery/storage access. Rear pocket as standard.

Also included as standard are pneumatic lumbar supports and seat heaters. A good all round seat ideal for on or off-road use. Our constant focus on quality with all our products ensures you get the best. Approved by Vehicle Certification Agency (VCA). Mark 1 Impact Tested (Millbrook Testing Ground). Approved worldwide and certification supplied with every seat. **Sold in pairs.**

Premium High Back 2nd Row Seats

Pioneering Style & Comfort
Introducing the Premium High back seat for second row passengers in 109 and 110 Station Wagons.

Sold as single seats to be installed in any variety of combinations you choose. These are available as right hand, centre and left hand assemblies.

Each seat includes; seat base, under body mounting plate and mounting hardware. The seats utilise the existing second row seat belt configuration so there is no need to adapt your belts or you can purchase new seat belts from Rovers North.

Approved for child seats 0 to 6 months and booster seats 6 months onwards. The design shape of the seat has been specifically developed to hold a child restraint in place and the seats backs are all individually adjustable with a recliner action. Not isofix compatible.

Product Information

Add Factory Installed Heat or Lumbar support to any seat, see p 55.

Defender Moulded Matting System

The Molded Matting System from Exmoor Trim has been specifically designed to increase ride comfort by greatly reducing heat and road noise.

The 3 piece matting system is manufactured entirely from black cast dense polyurethane using precision injection mold tooling.

The black floor mat is a one piece floor section that covers the driver's / passenger's foot-wells and the gearbox tunnel. This design feature ensures maximum soundproofing and heat suppression.

The black one piece seat box cover encases the 3 open sides of the seat box to also greatly reduce noise and heat.

This kit is available for both Defender NAS and RoW models with LT77, R380 manual transmissions and ZF Automatics.

NOTE: Some trimming is required when installing the Black Molded Matting Systems in LT77 and Automatic transmissions. The kit is also supplied with a bulkhead panel and the seat box cover is one piece and will require specific fitting.

Exmoor Trim Nylon Waterproof Seat Covers

These are manufactured from an exclusive waterproof material that is totally non slip. This means that you won't slide off the seat and the cover won't slide on the seating fabric. All our waterproof seat covers are specifically tailored to fit each seat. This guarantees they will enhance the interior unlike a baggy seat cover. Front covers are a one piece cover with a large rear pocket.

NEW

Slickshift Shift Lever Upgrade Kit for Defender LT77, R380 (inc Td5)

This new, innovative design dramatically improves your driving experience. Built for 5-speed Land Rover Defender LT77 / R380 gearboxes, Slickshift improves gear changes by minimizing the gear lever travel. This creates quick, precise and noticeably smoother gear shifts every time. Installs quickly and easily from the interior of your Defender. Requires no drilling, or special tools. Made in the UK by Syncroworks Developments. **FITS:** Defender 5 speed LT77, LT77S and R380 gearbox main lever bases from 1984 - 2006.

Rovers North Radiator Muffs

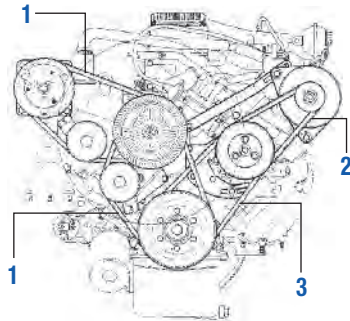

In the snowbelt, this simple accessory will make a big difference in your Land Rover's winter performance. By controlling the air flow through the radiator in freezing weather, the engine can run at its optimum operating temperature. This means reduced engine wear and increased heater output. Features superior materials and construction for improved durability and function.

Pro Sport + 2 inch Shocks

Exclusively designed for off-roading Land Rovers. This is a true +2" longer than standard shock. The advantages when driving off-road are remarkable as these shocks are built with hardcore use in mind. Fitted with velocity sensitive valving means the shock will automatically adjust its internal damping to suit driving conditions, the harder you punish them the better they work. On the drive home you'll really notice the superior ride quality and handling.

Kits sold as set of four shocks.

TerraFirma 2" Lift Coil Spring Selection

All TerraFirma Coil Springs have been designed to provide approximately 2" (50mm) of lift while carrying light, medium or heavy loads.

Load carrying coil springs are often progressive or variable (V) this provides a combination of comfort and load carrying in one spring.

It is worth noting that TerraFirma coil springs are sold in pairs, in many cases one spring is 10mm longer than the other, the longer spring should always be fitted to the driver's side. **Sold in pairs.**

Genuine Shock & Spring Kits

The first comment we receive from guests who test drive a new Defender is about how well it rides and handles. We got so many requests from owners desiring to improve their suspension to the level of a new Defender that we started stocking the latest and greatest Land Rover shocks. Land Rover Suspension components feature superior performance variable rate coil springs and Genuine shocks feature the latest nitrogen gas pressurized valving technology for overall superior suspension performance. So if you have had enough of aftermarket replacement suspension kits and long for something better, you won't be disappointed with Genuine Land Rover parts. Each kit includes four Genuine coil springs and four Genuine shocks for a complete replacement matched set, shock mounting bushings and hardware included.

Tent Triumphant

continued

Continued from page 19

Next up, we hit the hot trail to Monument, Oregon. Our drive took us through the John Day Fossil Beds, famous for their paleontology and geology, and the picture-worthy Painted Hills. Swinging north, we passed the fruit tree orchards of Kimberly (my kids think I should run for mayor) into the ranch lands of Monument. We parked the Rover in an empty pole barn, thankful for the shade on the searing hot Fourth of July weekend. By now tent set up proved a cinch and minutes later we basked in the cool of the John Day River. When night arrived, we climbed up into bed watching fireworks blaze trails in the sky. A cool finally settled in as crickets began their chirping.

We slept snug as bugs in a rug, content to give the kids another year or two in the roof top tent before we boot them to the ground annex. They certainly view our Land Rover trips through their own set of lenses; occasionally our priorities clash. Tent take down provides a good example! Sometimes they've bunched up the bedding like a puff ball, making battening down the hatches challenging. Other times the little rovers compete to see who climbs up on the Disco to help Jason strap stuff down. Some days arguing competes with tent takedown, slowing down everything. We're working on our *trail'tudes*.

As the end of summer approached we geared up for our annual trip with the Pacific Coast Rover Club. Meeting up with fellow rovers in Rome, OR, we headed for the Owyhee Canyonlands in a corner of the state where Idaho, Nevada and Oregon meet. The destination is Three Forks Hot Springs which remains pristine and inaccessible for most. Primitive roads descend steep and rocky paths. Help lies many miles away, but we came prepared as a convoy. We caravanned down the canyon and spent two blissful days hot springing and talking shop. We had rovered into an ever-changing light that bounced off canyon walls.

A few days later, we reluctantly turned the compass towards home. I lay awake that night, anxious about getting out of the canyon. The Discovery sits top heavy these days with the tent, fuel, water, and storage bin up on the roof top rack. At one point while driving out, I can't see the road in front of us anymore. We are angled, with only a view of the sky, except for the sheer drop off out the driver's side window. My insides shuddered, but we made it up and out, just as club members had assured me. We took new memories with us, but also hoped we taught our kids how to thoughtfully and carefully explore a world that remains unknown to many. Sure, some days the trail is just plain trying (with our without kids), but most trail days are terrific and there is no place our family would rather be.

Six months after installing the tent, we are happier than ever with our decision. The tent elevated (pardon the pun) our Rover excursions and ultimately enabled some wonderful memories. What do we like most about the tent? Our 40+ year-old backs now rest firmly on 3" of cushy foam mattress. *Achy breaky backs be gone*. Second, our gear no longer bumps and dumps all over dusty roads when we open the rear door. This is nice; really, really nice. Lastly, the tent saves us morning take down time. When traveling with the club, the morning pull out time is usually 8 am, and we routinely run last in the readiness cohort. With four people in the Disco, the morning prep and stow time simply takes longer, no matter how many gears we have engaged. Yet with our roof top tent, we managed to be the first ready more than once this summer. That's progress, people!

Ironically, two extended family members bought Airstream trailers this past summer. Airstreams offer sleek, sophisticated, first class accommodations. It's tempting to be jealous, but our roof tent allows us to visit places far off the beaten path. Airstreams do not go down copper colored canyons. We should have bought the tent and racking years ago, but there's no time to lament that now... we are too busy enjoying it!

Sightings

We took a break from shoveling snow off the roof to put together the Sightings for this issue. The number of entries demonstrate that many enthusiasts hunker down while searching out Land Rovers in advertisements, commercials, movies and online sites.

It's always helpful for veteran and novice Sighters alike to review the rules that govern when we award a Coveted Mug:

Rule #1 - All Sightings receive recognition and our appreciation, but not necessarily a mug. We reward only those Sightings that capture the unique qualities of Land Rovers and their owners, and display them in a distinctive way.

Rule #2 - If your Sighting doesn't really surprise you, it won't surprise us, either—thus, we can't award you a mug. We're delighted, but not surprised, that Land Rovers appear in British television programmes, British publications, films with British themes and shows about African safaris. You shouldn't be surprised, either, and should consider looking for other ways to get a coffee mug.

Rule #3 - At an ever-changing date before publication, we close off the Sightings; for this issue it was October 31, 2014. If we've mentioned the Sighting in an earlier issue, we might not mention it again. If you're new to the family of Land Rover enthusiasts, you may not have seen your Sighting in an earlier issue.

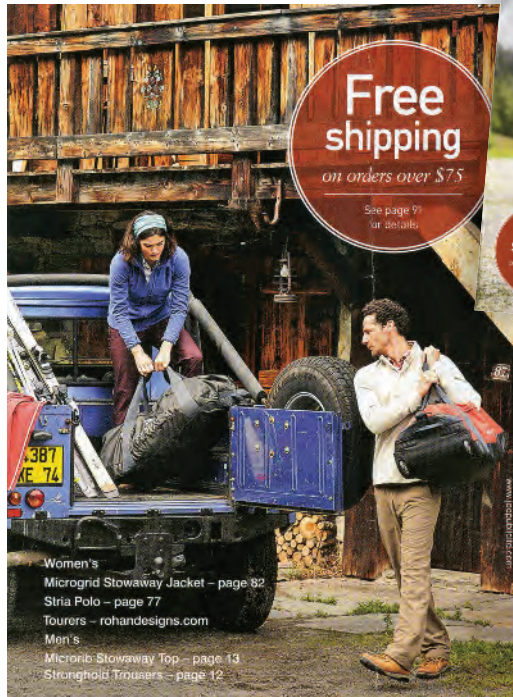

Rule #4 - We're not outfitting your kitchen. If you qualify, one mug per Sighting per issue.

Rule #5 - Sightings that are Land Rover references in books go to our Literary Land Rover Editor for mention, but only when space permits.

Rule #6 - Psst... Email submissions—remember, we can't send a mug by email. Send us your real name and shipping address, too. Psst... if we can't read your name and address because of atrocious penmanship, we can't recognize your Sighting, or send you a mug.

Rule #7 - Grudgingly, very grudgingly, the Editor admits he might have made an error. Let us know if you think you've been jobbed, but all decisions of the Editor are final.

Advertisers always love to have Land Rovers fluff up their product. Richard Poole, Madison, MS, found his Series 109" Dormobile used in a Buffalo Herd ad that appeared in a regional magazine. J.D. Gamling, Mobile, AL, spotted a clever "Prep My Ride" t-shirt for sale in the Lauren James catalogue, complete with a pink Defender 90. Lawrence Bart, Aspen, CO, Camille Morrison, Savannah, GA, Megan Link, Norfolk, CT, John Geier, Broomfield, CO and John Trotter, Sudbury, MA, noted that the lat-

blue Series III in an episode of *Scorpion*. Ryan Ziffer, Lafayette, CO, noted that the *Fast and Loud* guys spent time rescuing a 60s Corvette, but ignored the 109" SW behind it; at least it would have been loud.

Jonathan Speed

March, Roanoke, VA, watched a *Top Gear* episode that matched a Discovery 4 against its 4x4 competitors. He also enjoyed watching a Range Rover Evoque get some screen time on a *CarsTV* episode. Derek Leith, Frontenac, MO and Jay Geaney, Cabot, AR, noted a gun-toting soldier leaping out of a II-A in Africa in a *Black Hat* episode. Speaking of TV, Josh Lombardo [see Rules #2 and #6] and Harvey Allard, Dudley, MA, spotted a Defender on safari on an

Expedia commercial. Bradley Phipps, Medway, MA, noted an ad for OutsideTelevision.com that featured a Series II-A serving as a camera platform.

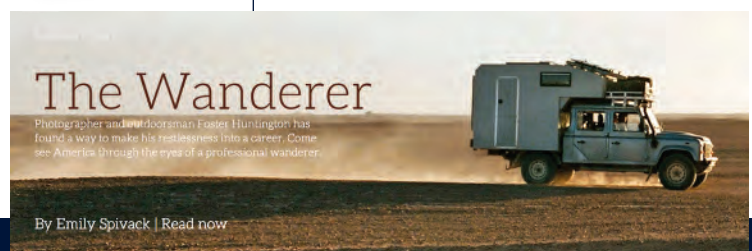

est Sundance catalogue features a Series I, to draw attention to a lovely model. Sperry Topsiders features a Defender in their online advertising, reported Greg Akin, Abilene, TX. Pendleton Shirts included a red Series Rover in their recent catalogue, reported Ken Gummerston, Baltimore, MD. Kevin Humphrey, Jonesboro, AR, spotted a Defender 90 pulling a stuck Land Cruiser through the mud in the latest Ex-Officio catalogue. Jeff Bang, Staunton, VA, Joshua Lombardo, Cumming, GA, Andy Derousseau, Rogers, AR, Bill Hardaway, Woodland, GA [see Rule #6] and John Porter, Sebastian, FL, spotted a Series Land Rover and four

toffs wearing Dubarry coats in their *Garden and Gun* magazine ad.

Television programs sometimes need the boost of Land Rovers to make them more appealing to viewers. Keith Shepherd, New York, NY, enjoyed seeing a Defender 110 in episodes of *Tyrant*; Gary Hatch, Lancaster, IH, spotted one in *The Mysteries of Laura*. Abel Villesca, Albuquerque, NM, spotted a 110 in an episode of *Madam Secretary* that did not take place in the UK. Kris Heikkila, Mason, NH, stated he's tried for 20 years to find a winning Sighting and succeeded with the

Steve Andrews, Easton, MD, spotted a Series Rover at work in an article in *Modern Farmer*. Jonathan Speed March, Roanoke, VA, found Range Rovers and Defenders in an anime series called *Tokyo ESP*. Nelson Rochester, San Antonio, TX, sent in a terrific photo from 1968, of the royal couple with their Series Land Rover [see Rule #2]. "Surf's up," noted Mark Sterrett, Watsonville, CA, as a Defender brought boards to a surfing locale in *Surfer Magazine*. Eric Wolff, Newport News, VA, spotted a Series 109" at EuroDisney, outside

of Paris. Adrian Haskaj, Fayetteville, NC, purchased a copy of *African Critters* at a children's book fair and enjoyed seeing the military Land Rovers on its pages. Charles Bell, Mobile, AL, enjoyed finding the Series III in his kid's book, *Thea Stilton and the Journey to the Lions Den*. Kenis Sweet, Queensbury, NY and Marc Waiter, Osage, IA, found Defenders on safari in an article in AAA magazine.

Tom Slaughter, Maywood, NJ, started a thread on the Defender Source forum on Rovers North Sightings mugs. Ryan Cope, Orem, UT, noted that Emily Spivak's photo book, *The Wanderer*, came up on Ebay's home page; the photo chosen was a Defender 130 camper conversion. Mac Surber, Westborough, MA, spotted a Defender 90 in a special offered on the SteepAndCheap app/website. We usually don't receive political satire Sightings, but Patrick McGrew, Albuquerque, NM, enjoyed a Palestinian spoof of ISIS; how nice to see a Land Rover in a newspaper cartoon. Alden Streatly, Lake Oswego, OR, noted one in "Gazelles" in an issue of *The Oregonian*. The Vermont-based band Phish used a Series Land Rover in their promotional posters for a Labor Day festival in Colorado, reported Bill Schimikowski, Westboro, MA.

These companies have used Land Rovers in sequential catalogues and/or online, but we want to give credit to Sighters for reporting them to us. Boden USA returns

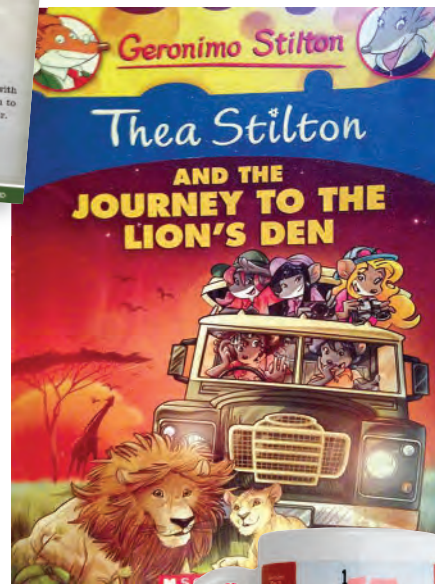

with a Series III in their Fall catalogue, noted John Kwasnik, Sherburne, NY, Tammy Lassiter, Centerville, VA, Saskia Lynn Comess, Bellingham, WA, Dave Moran, Newtown, PA, Dave Smith, Scottsdale, AZ, Derek Leath, Frontenac, MO and Andy Derousseau, Rogers, AR. Curt Kolcun, Leesburg, VA, Mike Stenzler,

Wilton, CT, Camille Morrison, Savannah, GA, Gus Davion, Short Hills, NJ and Bob Rubery, North Tustin, CA, spotted a late Series II-A in the Field Outfitters catalogue. Gus Davino, Short Hills, NJ, spotted a "109" in the Bloomingdale's catalogue. Eddie Bauer continues its use of Land Rovers in a recent catalogue, noted Dave Morrison, Rockaway, NJ. Warwick Hansell, Salt Lake City, UT, and Spencer Norcross, Arlington, VA, reminded us of the Land Rovers in the Orvis catalogue. Woolrich continues its use of Land Rover imagery on their website, reported Jim Ksionzyk [See Rule #6]. Frank Twarog, Hinesburg, VT, spotted the Rover again in the Rohan catalogue.

We've mentioned these in previous issues, but we want to give a shout out to Paul Kennington, La Grande, OR, for spotting the Defender 110 in the Hewlett Packard tablet ad. Ken Gummerson, Baltimore, MD, reminded us of the Land Rover appearances in the Sundance catalogue. Ron Dade, Washington, DC and, Savannah, GA, reminded us of the Land Rover in the Kevins catalogue. //
